

SmartSoft for SmartScan is a LabVIEW graphical user interface for configuring and controlling a SmartScan fiber Bragg grating interrogator.

SmartSoft for SmartScan can be downloaded from the below links – please select the version suited to your model of SmartScan.

On clicking the appropriate link, a zip file will be downloaded. After downloading, extract the zip files to a suitable location on a Windows PC. To install the software, run “setup.exe” and follow the instructions that appear during the install process. The installer will place a shortcut in the Windows Start Menu under the Smart Fibres program group and on the Desktop.

Standard SmartScan and SmartScan Lite models

SmartScan and SmartScan Lite models with USB Logging

SmartScan CAN models

Standard SmartScan SBI and SmartScan SBI Lite models

SmartScan Aero Mini

Modular SmartScan

If not already installed on the host PC, the National Instruments' LabVIEW™ Run Time Engine (RTE) must be downloaded and installed. At the time of writing, the RTE is available at www.ni.com/en-us/support/downloads/software-products/download.labview.html#305508

Make the following selections on setup: Supported OS = Windows, Version = 2015, Bitness = 32-bit, Editions = Runtime

In Case of difficulty, contact Smart Fibres Technical Support at +44 1344 484111 or info@smartfibres.com
